System Health Check

If you've got an existing solution, but want to make sure it's working as expected, our System Health Check is a good place to start.

We'll review the performance of your entire scheme and how this compares to your requirements, by running a number of thorough checks.

These include:

- System Fault Assessment
- Radio Trampling Evaluation
- Duplicated Asset Appraisal
- Node to Collector Assignment Review
- Additional Review
- Communication Performance Audit
- Inactive Assets
- Collector Placement Appraisal
- Invalid Node Type Review

This will help us provide you with a report that details the assessments we've made, which will give you an idea of the corrective measures you can take to improve your scheme.

Of course, if required, we can guide you through this process and recommend best practice.
